## ENTRANCE REG. SYSTEM

Based on a tried and tested principle:  
Trust is good - checks are better

- Door receipts safeguarded
- Immediate savings and better control
- 100% overview – 100% check
- Counts even if there is a power cut
- Several stamps can be connected to the same counter box
- The unit can be zeroed after use, but only by the person with the PIN
- Very easy to install – the unit just has to be plugged into the mains
- Choice of UV or visible printing
- 2-year warranty

## ENTRANCE RE

### Are all the door receipts going into the right pocket?

#### 100% overview – 100% check

“Trust is good – checks are better” – not exactly an example of the latest management philosophy, which delegates responsibility to staff, but there are industries and areas of business where checks are vital to safeguard income from door receipts. With the Entrance Reg. System door receipts are fully safeguarded.

#### How many people have been admitted?

The number of guests is controlled using the electronic counter. It is impossible to cheat the counter function, not even during a power cut, as the unit will continue to function and an alarm will go off. The unit has a PIN, which only the person in charge knows.

The unit can be zeroed after use or at a shift change, but only by the person with the PIN code. It is possible to turn the display off during operation so that it can only be read if the PIN is entered.

#### Remote control

In many establishments the owner has to man the door himself, literally for the sake of security. This is no longer necessary with the Entrance Reg. System. The counter box can be connected to the office by cable, enabling it to register admissions up to 500 metres away from the door.

## REG. SYSTEM

This means that the doorman only has to do the physical stamping and does not have any access to the recorded data. The counter box can, of course, be installed at the door as well – which is what most clubs prefer. Several stamps can be connected to the same counter box if there are several entrances. The system comes with a 2-year warranty.

### **Easy installation:**

Plug the counter into the mains and activate the PIN on the counter box. The counter is now ready to use. When the skin is touched, the customer is registered on the display. The counter box can be zeroed by activating the same PIN.

### **Topping up the ink:**

When topping up the ink, it is very important not to put too much ink on the pad. The pad must never be wet, only moist. If the right amount is used, ink will only be applied to the text on the rubber stamp. It is very important to clean the stamp with clean water after use and dry it with a cloth to prevent old ink from building up.

NB: Always read the counter before cleaning.
